

SSAGES::GridBase< Eigen
::VectorXd >::at

SSAGES::GridBase< Eigen
::VectorXd >::GetIndex

SSAGES::GridBase::GetIndices

```
graph LR; A[SSAGES::GridBase< Eigen::VectorXd >::at] --> C[SSAGES::GridBase::GetIndices]; B[SSAGES::GridBase< Eigen::VectorXd >::GetIndex] --> C;
```

The diagram illustrates a relationship between three C++ functions. On the left, two white rectangular boxes with black borders contain the function signatures: `SSAGES::GridBase< Eigen::VectorXd >::at` (top) and `SSAGES::GridBase< Eigen::VectorXd >::GetIndex` (bottom). On the right, a gray rectangular box with a black border contains the function signature `SSAGES::GridBase::GetIndices`. Two blue arrows point from the right side of each white box to the left side of the gray box, indicating that both `at` and `GetIndex` are implemented by or delegate to `GetIndices`.
